SUMMARY

Computer Science Engineering graduate with a strong foundation in SQL, Python, and cloud fundamentals, and a focused interest in Data Engineering. Hands-on experience building data-driven projects involving data collection, cleaning, storage, and visualization using tools such as Power BI, PostgreSQL, and Microsoft Azure. Quick to pick up new data platforms and eager to grow into ETL pipeline development and cloud-based data workflows. Strong problem-solving ability, excellent time management, and a genuine passion for turning raw data into meaningful, actionable insights.

EXPERIENCE

INTERNSHIP

- Frontend Web Development Internship:** Gained hands-on experience developing responsive, user-friendly web interfaces. Contributed to designing, coding, and optimizing front-end components using HTML, CSS, JavaScript, and modern frameworks, enhancing user experience and interface aesthetics.
- Java Development Internship:** Developed and maintained backend services, working extensively with core Java for application logic, debugging, and optimization. Assisted in building efficient, scalable solutions, including working with structured data to support backend functionality and performance — sparking a deeper interest in how data moves through systems.

PROJECTS

Retail Sales ETL & Reporting Dashboard (Personal Project):

Built a lightweight ETL workflow to extract raw retail sales data from CSV sources, clean and transform it using Python (Pandas) and SQL, and load it into PostgreSQL for structured storage. Designed an interactive Power BI dashboard on top of the cleaned dataset to visualize sales trends, top products, and regional performance — a first hands-on introduction to data extraction, transformation, loading (ETL), and basic data quality checks.

Data Lakehouse using Medallion Architecture (Personal Project) — Azure Databricks:

Designed a small-scale data lakehouse using Medallion Architecture (Bronze, Silver, Gold layers) on Azure Databricks to organize sample datasets by processing stage. Built basic PySpark notebooks to move data from raw (Bronze) through cleaned (Silver) to analysis-ready (Gold) layers, gaining hands-on exposure to modern lakehouse design and layered data processing.

Teacher-Student Database Management System — SQL & Database Design:

Developed a SQL-based system to streamline educational records, reducing manual workload by 20%. Implemented indexing on key columns, reducing search time for student records by 30%.

QR-Code Generator:

Built a versatile QR-code generator that lets users create customized QR codes from text input and download them as PNG files, using HTML, CSS, and JavaScript in a clean, easy-to-use interface.

EDUCATION

B.Tech. in Computer Science & Engineering

JIS College of Engineering

CGPA: 8.56

10/2021 - 06/2024

Diploma in Computer Science & Technology

The Calcutta Technical School

CGPA: 7.9

08/2018 - 09/2021

Higher Secondary

Prafullanagar Vidyamandir

81.60%

2016-2017

Secondary

MNC Nababharati Sikshaniketan High School

65.28%

2014-2015

ADDITIONAL INFORMATION

- Technical Skills:** Python, SQL, Java, HTML, CSS, JavaScript, DBMS, PostgreSQL, Power BI, Microsoft Azure, ETL Fundamentals, Data Cleaning & Transformation, Object-Oriented Programming, Computer Networks, MS Word, MS PowerPoint.
- Languages:** English, Bengali, Hindi
- Interests:** Exploring new data engineering tools and cloud platforms, traveling to experience new cultures, and music as a source of relaxation and inspiration.
